My first Code198x experiment

Choose one activity and keep this sheet beside its lesson. You can write, draw or discuss your answers. There is no score, and you can ask for help.

Activity and lesson address:

Before running

What do I expect the starting program to do?

Make one change

What will I change? What do I expect to happen?

Compare and explain

What happened? Which instruction helps explain it?

What surprised me, or where did I need help?

Keep the work

Where did I keep my program or paper prediction? What did I check in the saved copy? If I have not run it yet, write that down too.

Choose a next step

What would I like to try or understand next?

Activity choices and full lesson addresses:

Make a greeting with BASIC: https://code198x.com/systems/sinclair-zx-spectrum/basic/meet-basic/unit-01-make-the-spectrum-answer/

Change the border with assembly: https://code198x.com/systems/sinclair-zx-spectrum/assembly/meet-assembly/unit-01/
